EDUCATION

University of California, Berkeley

Expected Graduation: May 2026

Bachelor's in Computer Science, Bachelor's in Data Science

GPA: 3.875/4.0

Relevant Coursework: Data Structures and Algorithms, Machine Structures, Object-Oriented Programming, Computer Security, Data Engineering, CS Theory, Machine Learning, Artificial Intelligence, Inference, Data Science and Analytics

Honors: Dean's List, Honors to Date (5x), Upsilon Pi Epsilon (Computer Science Honors Society)

Organizations: Data Science Society (Vice President, PM), Computer Science Mentors, Berkeley Engineers and Mentors

EXPERIENCE

Idler (YC S25) / Widget Factory

Nov 2025 – Present

QA Engineer

San Francisco, CA

- Ensure production-grade coding failures generated by AI agents are fair, well-specified, and coherent before training
- Conduct code review to improve reinforcement learning environments that prepare models for production-grade coding

UC Berkeley CDSS

Jun 2024 – Present

Lead Teaching Assistant

Berkeley, CA

- Teach **1200+** students in Data 100 ☑, host discussions for **60+** students, and lead an **infrastructure team of 4**
- Streamline course website ☑ development with **Jekyll** and automate **CI/CD** workflows through **GitHub Pages**
- Establish communication with **Datahub** and **Pensive** teams to debug users' **Jupyter Instances** and submissions

Oracle

Sep 2025 – Dec 2025

Software Engineer (Contract)

Berkeley, CA

- Create an end-to-end AI tutor on **Oracle Cloud Infrastructure** with a RAG pipeline built on **Oracle Database** vectors, delivering source-grounded answers within a **2-second** p50 latency SLO for **60+** concurrent users
- Implement keyword/semantic retrieval using **Autonomous AI Databases** and **vector embeddings** for relevance
- Construct a resilient data layer for **60+** users with usage stats, conversation logs, and insightful dashboards
- Productionize with **CI/CD** (GitHub Actions), **OCI** autoscaling, and observability to sustain **99%+** uptime

Amgen

Jun 2025 – Aug 2025

AI Engineer Intern

Thousand Oaks, CA

- Achieve **87%+** accuracy in text-to-SQL operations by building generative AI and testing frameworks in **Databricks**
- Optimize **Databricks SQL** connection/execution by **86%+** in the worst case, reducing operations to **0–80 seconds**
- Deliver a cache-optimized **Streamlit** application to save **500+** hours and automate **60,000+** queries each year
- Leverage large language models (LLMs) to automate campaign analytics across **27 brands** using distributed AI agents

AmigoAI (SkyDeck)

Dec 2024 – May 2025

Software Engineer Intern

Berkeley, CA

- Devise an automated end-to-end testing framework using **Playwright** to detect regressions in the product's UI
- Engineer a web scraper to emulate user agents, load cookies, and bypass dynamic content to get **1000+** data entries
- Construct a cross-format file processor to extract text for a computer vision pipeline tracking real-time user progress

PROJECTS

Scalable AI Tutor (UberTA) ☑ | Python, TypeScript; FastAPI, Azure, React, Next, Tailwind

Jan 2025 – May 2025

- Architect event-driven ingestion pipeline on **asynchronously** chunk/embed documents into **Azure AI Search** vectors
- Build **TypeScript** frontend powered by **FastAPI** backend with **MSSQL** schemas and **RBAC** for multi-tenant courses
- Ship endpoints for chat (conversation history, markdown rendering), document **CRUD**, and admin management separated into services (**Edison** ☑ chat, embedding worker, API) to improve reliability and deployability

SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript, C, C++, Golang, R, Scheme, x86, RISC-V, HTML, CSS, L^AT_EX

Software Development: Git, Docker, React, Next, Tailwind, Oracle, Azure, REST, FastAPI, Flask, Selenium, Playwright

Data Science/Machine Learning: Pandas, NumPy, Scikit-Learn, PyTorch, TensorFlow, LangChain, Databricks, Spark, Matplotlib, Seaborn, Tableau, OpenCV, Hugging Face, NLTK, GENSIM, TextBlob, SpaCy, Tesseract-OCR, PyMuPDF/Fitz
